Education

Ph.D. in Agricultural and Resource Economics, University of California, Davis (Expected) 2027

Committee: James N. Sanchirico, Jamie Hansen-Lewis, Erich Muehlegger

M.A. in Economics, University of Wisconsin, Madison 2022

B.S.E. in Chemical Engineering, University of Michigan 2017

Research Fields

Environmental Economics, Industrial Organization, Agricultural Economics, Trade

Research in Progress

The Behavioral Impact of Sulfur Fuel Content Regulations

Abstract In 2012, the US and Canada implemented a technological regulation, called the ECA (Emission Control Area), in their exclusive economic zone to reduce emissions from ocean-going ships. The ECA required ships to use low-sulfur fuel, increasing a ship's fuel costs. In transportation, however, an increase in fuel cost will lead to changes in shipping supply characteristics such as operating speed, ship size, and frequency. This paper aims to quantify the extent of adjustment in maritime shipping supply characteristics in response to the ECA regulation. I first present a stylized model to highlight how the ECA affects shipping supply characteristics by changing the cost of fuel. I then test these predictions using port entrance and exit data from the US Army Corps of Engineers. I find that for the aggregate cost increase, treated routes saw ships that were, on average, about 15 percent larger in gross tons and had a 25-trip increase in the frequency of trips compared with similar, untreated routes, and ships on treated routes moved 16 percent slower than predicted in the imputed counterfactual. The size of the cost change matters, however, for the response to ship size.

Behavioral Responses to Information on PFAS in Drinking Water

with Laura Alcocer Quiñones and Jeff Hadachek **Abstract** This paper estimates the effect of information provisions on the awareness and avoidance of PFAS exposure. Past research quantified how individuals avoid exposure to contaminants, such as E. coli or lead, when notified by measuring additional bottled water purchases. The case of PFAS is unique; the full health effects of PFAS are relatively uncertain, and PFAS stays in drinking water longer than other common contaminants. We leverage variation in violations across nine states with PFAS regulations between 2019 to 2023 to quantify these impacts. We employ a two-way fixed effects design, pairing detailed violation data at the weekly level with retail scanner data. Our results show bottled water expenditure increases by 7% following the first PFAS violation and no significant increase for water filters. This increase represents an aggregate cost of approximately $4 million for the first PFAS violation.

Scholarships, Honors, and Awards

Scott McNiven Community Service Award	2026
Institute for Humane Studies Fellowship	2026
Becker Friedman Institute Price Theory Summer Camp	2025
UC Davis Jastro-Shields Graduate Research Award	2024
UC Davis Summer Research Fellow	2024
UW Madison, Honorable Mention Scholarship (Outstanding Research Paper in Applied Econometrics)	2022
Eagle Scout, Boy Scouts of America	2013

Teaching Experience

Associate Instructor, University of California, Davis

Introduction to Finance	Summer 2026

Teaching Assistant, University of California, Davis

Intermediate Microeconomics	Spring 2025, Fall 2024, Fall 2022
Econometric Theory & Applications	Summer 2024
Environmental Economics	Fall 2025, Winter 2025, Spring 2024
Operations Research & Management Science	Summer 2023
Principles of Finance	Spring 2026
Economic & Business Analytics	Winter 2026

Research Experience

Research Assistant, University of California, Davis

Tim Beatty & Joakim Weill: Estimated the labor response to wildfire smoke — Fall 2023 - Winter 2024

Research Assistant, University of Wisconsin, Madison

Sarah Johnston: Created an algorithm in R to match car information to VIN numbers — Summer 2022

Research Assistant, University of Michigan, Ann Arbor

Nathan Jones: Developed a starch nanopartical to identify carious lesions — Fall 2015 - Spring 2017

Professional Activities

UCD Natural Resource Economics and Policy Lab

Graduate Student Coordinator — 2025 - Present

UCD ARE Graduate Student Association

Representative — Fall 2022 - Fall 2024

Co-President — Fall 2024 - Present

Policy Researcher - Clean Wisconsin — March 2022 - Aug 2022

Summarized current academic knowledge around Natural Climate Techniques (Agroforestry or cover crops, for example) for carbon sequestration in agriculture, and made estimates to their effectiveness in Wisconsin

Quoting and Process Engineer - Advanced Plating Technologies — Jan 2018 - July 2020

Served as an engineering resource and initial contact for customers in need of surfacing finishes for their parts.

Presentations and Workshops

Agricultural & Applied Economic Association Annual Meeting	July 2026
Western Economic Association International Annual Conference	July 2026
Giannini Foundation of Agricultural and Resource Economics Student Conference	May 2025 & May 2026
8th Annual Social Cost of Water Pollution	Sept 2025

Other Writing and Media

Advanced Plating Technologies - Technical Blog

Solderable Gold Plating of Electrical Contacts (Aug 6th, 2020)

Nitric vs Citric Acid Passivation (July 11th, 2019)
